1 1	μμι 3–1/4"
Maximum Overall Length	2-11/16"
Maximum Seated Height	
Maximum Diameter	1-5/16"
Bulb	Metal Shell, MT-8
_ / K	ıll Wafer Octal 7-Pin
Pin 1 – Shell	Pin 5-Grid
Pin 2-Heater	Pin 7-Heater
Pin 3-Plate	Pin 8 - Cathode
Pin 4 – Screen (NEY)	
Mounting Position BOTTOM VIEW	Any
Maximum Ratings Are Design-Cen	
PUSH-PULL AMPLIFIER - Triode (
Recommended with Cathode-Bias Of	
Plate Voltage	300 max. volts
Plate Dissipation	8.3 max. watts
Typical Operation - Class A, Amplifier:	
Inless otherwise specified, values	
Plate Supply *	327.5 volts
Cathode Resistor A	500 ohms
Peak A-F Grid-to-Grid Voltage	54 volts
Zero-Sig. Plate Current	55 ma.
MaxSig. Plate Current	59 ma.
Load Resistance (plate-to-plate)	5000 ohms
Total Harmonic Distortion	1 %
Power Output	2 watts
l .	2 watts
* Actual voltage between cathode and plate will minus drop in cathode resistor.	
Type of input coupling used should not intro in the grid circuit. Transformer- or impeda	ouce too much resistance nce-coupling devices are
recommended. The grid circuit may have a resis	tance as high as, but not
greater than, 0.5 megohm provided the heater v rise more than 10% above rated value under any	oltage is not allowed to

PUSH-PULL AMPLIFIER - Pentode	
Plate Voltage	300 max. volts
Screen Voltage	300 max. volts
Plate Dissipation	7.9 max. watts
Screen Input	1.9 max. watts
	1.0 max. walts
Typical Operation - Class A, Amplifier:	
Unless otherwise specified, values	
Plate	300 volts
Screen	300 volts
D-C Grid Voltage #	-30 volts
Peak A-F Grid-to-Grid Voltage	60 volts
Zero-Sig. Plate Current	38 ma.
MaxSig. Plate Current	69 ma.

POWER AMPLIFIER PENTODE

(continued from preceding page) Zero-Sig. Screen Current 6.5 ma. Max.-Sig. Screen Current 13 ma. Load Resistance (plate-to-plate) 4000 ohms 3 % Total Harmonic Distortion Power Output watts

In circuits where the cathode is not directly connected to the heater, the potential difference between heater and cathode should be kept as low as possible.

With shell connected to cathode.

With shell connected to cathode. Screen connected to plate. Type of input coupling used should not introduce too much resistance in the grid circuit. Transformer— or impedance—coupling devices are recommended. When the grid circuit has a resistance not higher than 0.05 megohm, fixed bias may be used; for higher values, cathode bias is required. With cathode bias, the grid circuit may have a resistance as high as, but not greater than, 0.5 megohm provided the heater voltage is not allowed to rise more than 10% above rated value under any conditions of operation. introduce too much resistance

OUTLINE DIMENSIONS for the 1621 are the same as those for Type 12A6.

Curves under Type 6F6 also apply to the 1621.
