

ELECTRONIC VALVE SPECIFICATIONS

SPECIFICATION MOS(A)/CV2167
ISSUE 2 DATED 15.1.53

AMENDMENT NO.1

Page 2 Clause e Frequency Pulling

in column headed "Limits Max."
Amend "15" to "20".

June 1960
N.17178/D.

T.V.C. for R.A.E.

Specification MOS(A)/CV2167 Issue 2 dated 15.1.53 To be read in conjunction with K1001, excluding clauses 5.2, 5.3 and 5.8.	<u>SECURITY</u>	
	<u>Specification</u>	<u>Valve</u>
	UNCLASSIFIED	UNCLASSIFIED

—————> Indicates a change

TYPE OF VALVE - Magnetron	<u>MARKING</u>
CATHODE - Indirectly-heated	See K1001/4.
ENVELOPE - Copper	<u>BASE</u>
PROTOTYPE - VX4080	None

<u>RATING</u>		<u>CONNECTIONS & DIMENSIONS</u>	
		Note	
Heater Voltage	(V) 6.3		See Drawing on Page 4.
Heater Current	(A) 0.8		
Operating Frequency	(Mc/s) 9080	B	
Max. Mean Input Power	(W) 120		
<u>TYPICAL OPERATING CONDITIONS</u>			
Peak Anode Voltage	(kV) 12	AC	
Peak Anode Current	(A) 9	AC	
Field Strength	(Gauss) 5000	AC	
Peak Power Output	(kW) 30	AC	

NOTES

- A. When operating under these conditions the magnetron must be air-cooled so that the temperature of the block does not exceed 140°C.
- B.. A mechanical tuning adjustment is provided so that the valve can be set to operate precisely at this frequency.
- C. These operating conditions apply for
- $T_p = 0.2 \mu\text{sec.}$
 $\text{prf} = 3500 \text{ pps.}$
 $\text{VSWR} = 1.5 : 1 \text{ max. in No. 16 waveguide.}$

Under these conditions the heater voltage should be reduced to 4V when the HT is applied.

CV2167/2/2

NOTES

1. Applicable over whole tuning range. Tests shall be performed at HF, LF limits and at the nominal centre frequency as in Test (c).
2. For the above tests, the temperature of the anode block shall not exceed 140°C .
3. The valve shall be operated with full heater voltage applied for not more than 2 mins. before the application of HT and then reduced to $4V$.
4. The max. rate of rise of the voltage pulse shall not be less than $120\text{ kV}/\mu\text{sec}$ at the operating voltage.
5. The valve shall be coupled by means of Coupling I-S Cat. No. Z830003 to Waveguide No. WG16, which shall be terminated in a resistive load giving a VSWR better than $1.1 : 1$.
6. Measured with a VSWR of $1.5 : 1$ varied through all phases.
7. The RF bandwidth shall be measured at one-quarter power by means of the Spectrum Analyser.
8. No pulse shall be missing when viewed on the Spectrum Analyser. No double traces of voltage and current shall appear during a 5 sec. interval while the peak current is varied over the specified range.
9. The time of fall of the current pulse shall be less than $0.2\ \mu\text{sec}$ when measured between the points where the amplitude is 20% and 80% of the average amplitude over 80% of the flat portion of the pulse.
