5552-A

5552-A IGNITRON

- RMS voltage, current, and demand kva are on the basis of full-cycle conduction (no phase delay) regardless of whether or not phase control is used.
- ▲ Defined as (cycles "on")/(cycles "on" + cycles "off") during the specified averaging time.
- † For supply voltages between 250 volts and 600 volts, duty is proportional to supply voltage. For supply voltages lower than 250 volts, the values for 250 volts apply.
- * For supply voltages between 250 volts and 600 volts, demand anode current and averaging time are each inversely proportional to supply voltage. For supply voltages lower than 250 volts, the values for 250 volts apply.
- * Column 1 represents operation at maximum average anode current; Column 2 represents operation at maximum demand current.
